

EDUCATION**Masters in Business Analytics (STEM)**, University of Minnesota, Twin Cities, United States**May 2019****Bachelors in Electronics and Communication**, VIT University, Vellore, India**May 2015****EXPERIENCE**INSITE AI, *Remote - Canada, ON***Lead Data Scientist - Promotional Analytics****May 2026 - Present**

- Lead a team of 3 data scientists building a promotional analytics platform for a global consumer health (CPG) client, delivering promotion effectiveness measurement and forecasting across their retail portfolio.

THE HOME DEPOT, *Toronto, ON***Senior Data Scientist - Supplier Analytics (Supply Chain, Retail Media Ads, GenAI)****Dec 2022 - May 2026**

- Designed an ARIMA-based anomaly detection system on GCP BigQuery and Cloud Composer, identifying weekly stock and sales anomalies, increasing supplier active users by 8% and tripling engagement.
- Deployed ML models via Flask app on GCP App Engine, handling 30,000+ backend calls for real-time results.
- Built and operationalized a full-stack LLM agent chatbot on GCP. Leveraged ADK, implemented RAG search pipelines on vertex AI search, and scaled data management with NoSQL datastore.
- Contributed to scaling Home Depot's retail media A/B testing and incrementally framework(CUPED + geo-split + ghost ads), measuring true lift across millions of impressions and multiple SKUs; insights drove a 9-13% improvement in supplier ROAS, incremental sales accounted for 18M+ for the campaigns, and boosted supplier adoption by 35%.
- Mentor junior data scientists, reviewing pipelines, model code, and deployment practices to ensure reproducibility and reliability.

BRAINSTATION, *Toronto, ON***Data Science Instructor - Part Time****Oct 2023 - Present**

- Deliver weekend bootcamps on Python, SQL, ML, and cloud data workflows; mentor 40+ professionals per cohort.

CAPITAL ONE FINANCIAL CORPORATION, *Chicago, IL***Senior Data Scientist – Transaction Fraud Risk****Sept 2021 - Sept 2022**

- Built a transaction fraud XG-Boost ML model on Kubernetes using Kubeflow for orchestration, enabling daily refits and boosting fraud capture by \$10,000/week.
- Enhanced accuracy of fraud labels (target variable for fraud ML models) by ~2.2% through a PySpark data pipeline correcting for erroneous tags.
- Engineered velocity features for a fraud detection model, boosting fraud capture by \$120,000/week.
- Created quarterly dashboards and drift reports to ensure ML model performance in production.

BLUE CROSS AND BLUE SHIELD OF ILLINOIS, *Chicago, IL***Data Scientist – Enterprise Data Science Team****Aug 2019 - Aug 2021**

- Contributed to the design of the state-of-the-art [PEAQ framework](#) which is used to rank physicians' performance.
- Leveraged ML regression techniques to forecast missing appropriateness scores for over 15,000 Texas providers, achieving an Adjusted R² of ~64% and a SMAPE of ~8.9%.
- Created colon cancer screening outreach programs using a random forest model, which closed 5.2% more gaps than historical averages, saving approximately \$3.56M by predicting members' likelihood to get screened.
- Created a MVP by building ML/RNN(LSTM) models (Recall-0.79, Precision-0.45, AUC-0.79) on the custom trained word embeddings that mimicked nurses annotations and secured a ~1M buy-in from senior leadership.

ZS ASSOCIATES, *Pune, India***Business Technology Analyst****May 2015 - Jun 2017***Received Certificate of "Making an Impact" from senior leaders of ZS, in recognition of commitment and hard work***Healthcare and Sales Compensation Analytics**

- Led a tech-team of 4 members on an Incentive Compensation ('IC') analytics project for a Fortune 500 US Pharma Giant impacting over 2000 sales representatives and ~20M in client's revenue.
- Conducted testing-control analysis to assess the ROI and impact of IC contests and campaigns.

Marketing Analytics – Marketing-Mix Modeling

- Calculated channel wise ROI and reduced clients spend by 15% by improving targeting and channel investment strategies using multivariate linear regression and linear optimization techniques in R.

SKILLS

- Tools: Python, SQL, R, Tableau, AWS (Sagemaker), PySpark, PyTorch, Tensorflow, Docker, Kubernetes, Databricks, Snowflake, Datadog, Splunk, GCP, BigQuery, Airflow, App Engine, Flask, MLflow, KubeFlow
- Techniques: Marketing Mix Modeling, Predictive Modeling, Exploratory Analysis, Statistical Analysis, Big Data Analysis, Data Visualization, A/B Testing, Time Series Modeling, Natural Language Processing, Causal Inference
